Summary

What was the obstacle that would have prevented you from enrolling in APT L1?

What did you learn as a result of enrolling in APT L1?

I learned the basic of vulnerability assessment and penetration testing and got a great introduction to penetration testing tools and methodology.

**What specific feature did you like most about the course?**

The hole concept, I mean I have taken IT-online courses before they were boring and tough but this course was different I enjoyed it and learned a lot, the author has done a great job.

Would you recommend APT L1? If so, why?

Summary

What was the obstacle that would have prevented you from enrolling in APT L1?

If the class were not a self-paced class then it would have been difficult enrolling in this class. The flexibility of a self paced "hands-on" online class is a big plus for working professionals with family obligations.

What did you learn as a result of enrolling in APT L1?

I really enjoyed the hands-on approach of learning various penetration techniques. The class was well structured and each lesson built upon the previous lesson. As a Security+ certified professional, we are introduced to many of the concepts and techniques that are introduced in this class. Having to actually implement and execute the concepts reenforces the ideas and helps one appreciate them. As one who "learns by doing", I really appreciated the format of this class.

What specific feature did you like most about the course?

The hand's on virtual machine was a fantastic way to introduce the concepts. I appreciate the way a network was created using a virtual machine and how it was used to build upon each lesson. The documentation needs to be updated, however, to remove instances of VMWare since it is no longer available and emphasize Virtual Box as the default virtualization software.

Would you recommend APT L1? If so, why?

Yes. If one desires a self-paced, practical, hand-ons [and affordable] approach to many of the concepts introduced in the Security+ certification, I would strongly recommend this course. If one has a desire or curiosity of some of the basic "hacking techniques", by all means, put this class on your short list.

Is there anything you'd like to add?

I found the forums pretty sparse; there was little to no discussions on the online forum. I often wondered how many other people were enrolled in the class. I also found the interaction

Summary

What was the obstacle that would have prevented you from enrolling in APT L1?

Lack of any particular certification or specific recognition.

What did you learn as a result of enrolling in APT L1?

<mark>It was actually a very good introduction to penetration testing.</mark> I've attended a 2-day course on Web Application Hacking via Penetration Testing but I gotta say, I've learned more in APT L1 than I did in the 2-day course.

What specific feature did you like most about the course?

That has got to be the labs. The step by step instructions of how to get it done were really helpful but having had only 50-70% of the information and having to find out on our own how to perfect the steps and complete the labs partly on our own is definitely a good high.

Would you recommend APT L1? If so, why?

Yes I would. Its a pretty good introduction to the hacking world. I've had many people say things like "do people really hack like in the movies? typing command after command all the time?" That would be an interesting course for anyone to get a feel of it. It would also work really well as a starter to Penetration Testing as a whole.

Is there anything you'd like to add?

Maybe putting in some videos might be of help to demonstrate certain methodologies but otherwise, everything's great.

Summary

What was the obstacle that would have prevented you from enrolling in APT L1?

Two things almost prevented me from taking the course: 1. I'm on disability and funds are scarce. However, you won't hear me complain about the price; I know it's a steal. 2. I was unsure if I knew enough to enroll in the course, and wasn't confident that I'd do well.

What did you learn as a result of enrolling in APT L1?

I'm a tech/power user, and know a little bit about security. I'd have to list nearly everything that is outlined for the course in order to answer this question. ==In short, I learned a ton of new information, and even better; how to apply that knowledge to a given situation.== That being said, I know there's so much more I need to learn.

What specific feature did you like most about the course?

==Jeremy is a great instructor, and his response time to questions and/or grading the assignments was exemplary.== He was even responsive on weekends, something I did not expect. The course is challenging and requires critical thinking. You aren't just given answers, you must research information and combine it with the given material in order to complete the assignments. The balance between the two was perfect. Having a lab on my own computer was extremely helpful, and is much more preferable to than using an online lab. I don't have the best ISP, and there's nothing worse than being in the middle of a project and losing your connection. I liked that the course was self-paced, as I'm a slow learner and I need the extra time to really understand the material at hand.

Would you recommend APT L1? If so, why?

==Absolutely. The real question is; why not? You will learn, and the course is as much fun as it is challenging.==

Is there anything you'd like to add?

Thank you for providing such a great course at a more than reasonable price. It did leave me
